

WEB-BASED TIME & ATTENDANCE (ESS)

Tread new paths in time & attendance!

Until now, decentrally distributed company units, franchise operations, and even corporations have not found it easy to operate a professional time & attendance system. This type of system involves a very high degree of organizational and administrative effort and expense, especially for their small operating units with just a few employees:

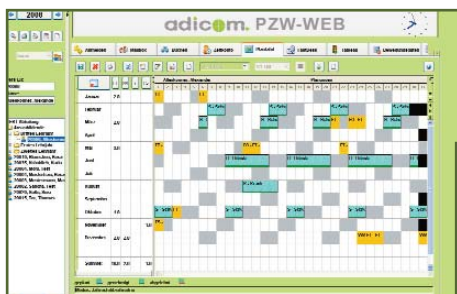

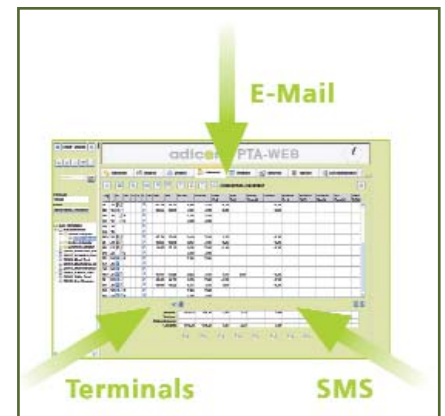

- Data is usually recorded by employees on time cards or in tables, and it is often centrally gathered or corrected. Real-time reporting for management or for the employees themselves is virtually impossible
- Large investments in time acquisition terminals and communication lines are necessary
- The IT department needs to be heavily involved in order to ensure the availability of the personnel time & attendance system

There are two ways to use web-based time & attendance:

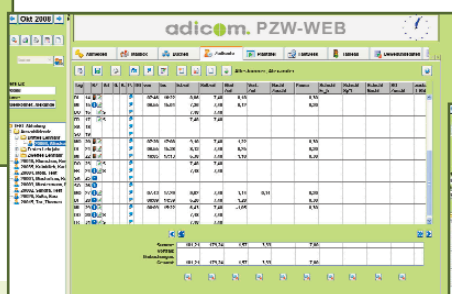

- Through the full availability and use of all functionalities of personnel time & attendance (master data maintenance, scheduling, corrections, information)
- As a workplace solution for corrections, scheduling, and information concerning absences, times, etc.. (with integrated approval via E-mail)

The solution: Adicom® Web-based Time & Attendance

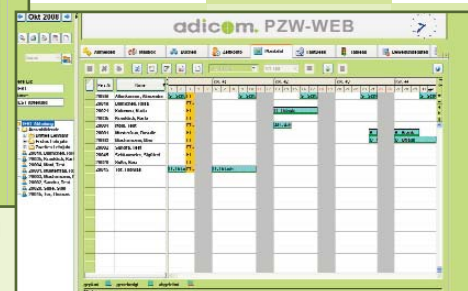

Adicom Web-based Time & Attendance gives each employee with access to a PC and an Internet browser spatially independent access to time & attendance functions. Examples of these functions include posting working times, projects, and cost centers, administrating time sheets, reading messages, or planning absences.

Time off work per year

Time sheet / Planning board

Your advantages at a glance

- Cost-effective, workplace-accessible time recording and time information (for example, in the home office and while traveling)
- Saves investment in data collection (with respect to staff numbers)
- Integrated workflow via approval concept for requesting and correcting times and absences
- Reduction in personnel queries in the personnel office thanks to direct account queries from the workstation
- Reduction in complexity costs through expandability of the solution for resource management and production process optimization

Adicom Software Suite...

is the solution and services package from Adicom for the seamless collection, scheduling, and management of all resources (e.g. personnel, materials, machines, and production equipment).

Since Adicom is modular, it can be efficiently used either as a whole system, or just as individual components. Adicom Web-based Time & Attendance can also be integrated with Adicom Personnel Time & Attendance, Adicom Connect, and Adicom Personnel Scheduling at any time.

Your employees will welcome Adicom Web-based Time & Attendance. The familiar Windows-like interface architecture and simple user guidance makes only minimal training necessary.
