

SAP NETWEAVER BUSINESS INTELLIGENCE

MAXIMIZE YOUR RETURN ON INFORMATION

BUSINESS DECISIONS REQUIRE A SOLID INFORMATIONAL BASIS – IS INFORMATION, THEREFORE, ANOTHER FACTOR OF PRODUCTION?

Business intelligence – a subject your company can't afford to ignore.

Or do you know exactly

- where your relevant business data has been filed?
- whether the information you receive comes from a consistent database?
- how much time and money your company spends on collecting information?
- how to make the right business decisions based on a multitude of data?

In modern society, decisions increasingly depend on up-to-date information. Simply collecting and storing data, however, is no longer enough. What benefits your company can derive from information depends on data quality and availability.

The SAP NetWeaver Business Intelligence software solution helps you incorporate former data islands into a powerful information pool ready to answer even the most intricate questions.

Business intelligence – the New Generation

Today's business intelligence solutions integrate data from disparate operative IT systems and enhance it with external market intelligence. Applying optimized planning tools, those solutions create a consolidated database for monitoring and analyzing corporate performance.

Already being the market leader in enterprise resource planning (ERP) software, as well as a global provider of business solutions, SAP now also heads the market for information gathering, processing and analysis: SAP NetWeaver Business Intelligence offers an end-to-end solution, from data collection through data storage and administration to presentation via the

SAP NetWeaver Portal. Its pre-configured information models, and automated data retrieval from SAP ERP systems considerably accelerate implementation.

Freudenberg IT benefits from many years of experience in managing business intelligence projects. As a certified "SAP Special Expertise Partner" we enjoy access to state-of-the-art IT knowledge. Optimize your company's information supply based on SAP NetWeaver Business Intelligence and let us help you design your own information platform according to your business practices and needs!

We provide a broad range of professional services and turn-key solutions around SAP NetWeaver Business Intelligence. Depending on your requirements, you can either order these as individual services or combine them like building blocks to set up the application configuration you need.

Services Surrounding SAP NetWeaver Business Intelligence

Analysis and Consultancy

In workshops we analyze your company's requirements, data sources and interfaces together. Our business information models

help you consolidate data from heterogeneous sources into a consistent database. The result of this process is evaluated, and complementary measures are aligned with your project strategy and schedule. Our consultants also provide a comprehensive list of project specifications to serve as a guideline for your project or subproject.

Project Design

During the design phase, we create extraction and transformation models, as well as data and presentation models for your Business Intelligence solution – thereby establishing the mechanisms for collecting data from your source systems, data processing, storage in SAP NetWeaver Business Intelligence, as well as presenting data in your reporting tools and, if applicable, your SAP NetWeaver Portal. These models are crucial not only for your solution’s scalability and expandability, but also for fast information retrieval from a unified, consistent data pool.

Additionally, Freudenberg IT offers refinement of your SAP NetWeaver Business Intelligence solution by designing integrated analysis and planning applications. The project design phase results in an individual implementation plan specifying objectives and measures for subsequent rollout.

Implementation

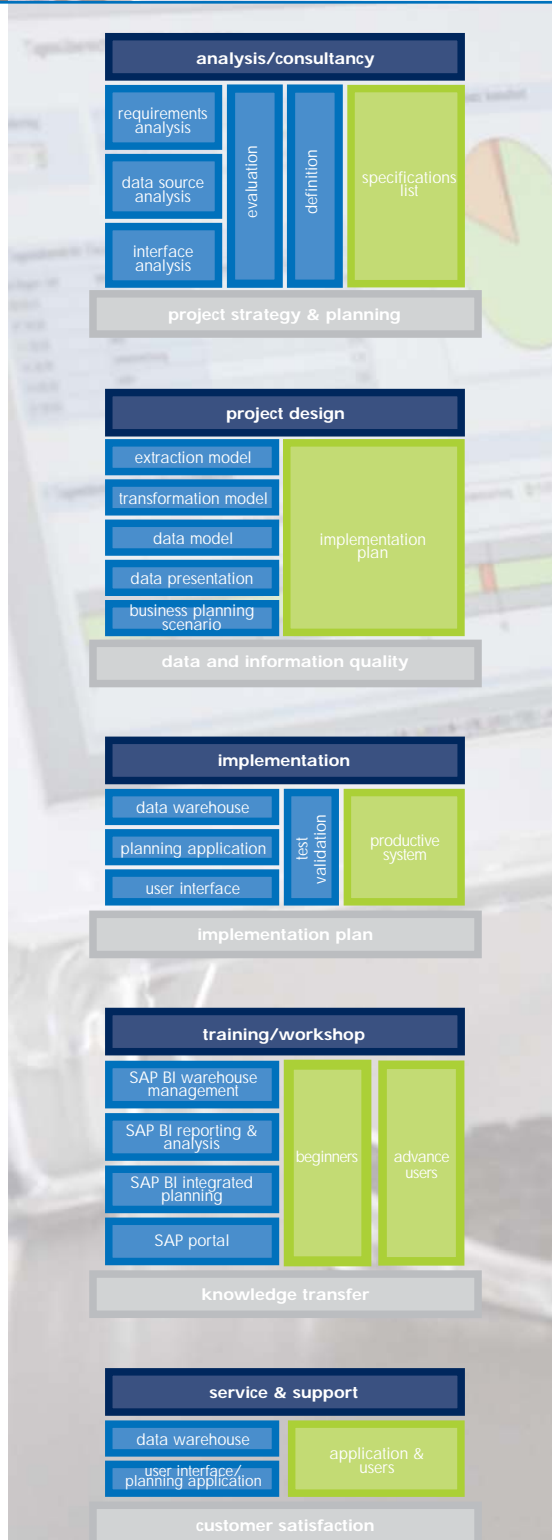

Based on the implementation plan, we set up an optimized business intelligence solution for your company. By translating your requirements precisely into software, we create the foundation for sustainable, secure information supply. After your solution has been tested, validated and released, you will be able to use state-of-the-art technology for easy yet flexible access to crucial business information along with sophisticated analysis and planning tools.

Training

Freudenberg IT offers basic and advanced SAP NetWeaver Business Intelligence training. Beginners start by learning how to apply the system’s basic functions and run pre-configured reports. Advanced users are instructed to create ad-hoc reports. By designing our training courses as workshops, we ensure smooth knowledge transfer and maximum user empowerment.

Service and Support

We will be at your side during the entire SAP NetWeaver Business Intelligence operation cycle, and will support those using it – starting, if requested, in the planning phase of your project.

Getting Started with SAP NetWeaver Business Intelligence

To launch your own business intelligence initiative, we recommend booking our evaluation workshop, which ideally results in a pilot project enabling you to get to know both the functionality of SAP NetWeaver Business Intelligence and Freudenberg IT's expertise. Our highly qualified and experienced consultants will accompany each step of your initiative, from software installation to full implementation of SAP NetWeaver Business Intelligence. We deliver custom-made solutions matching your business needs.

THE RIGHT FIT FOR YOUR BUSINESS
